EXPERIENCE

Indian Institute of Science Bengaluru

Jan 2026 - Present

Project Intern

Bengaluru

- Implemented an in-house timeline visualization web application to replace the proprietary Vosaic platform, eliminating a \$1,200 per year subscription cost and delivering equivalent functionality tailored to internal design workflows.
- Conducted prior art research and patent analysis; architected a 5-model CNN inference pipeline and performed a comprehensive study on agentic AI frameworks to support IP documentation and innovation strategy.
- Prototyped a lightweight AI system integrating object detection, spatial reasoning, and adaptive behavior generation modules to enable dynamic human-robot interaction in real-time environments.
- Developing production-grade ML models alongside synthetic and curated dataset pipelines to support patent filings, encompassing data annotation, model training, and performance benchmarking.

EDUCATION

B.Tech in Computer Science & Engineering

National Institute of Technology Calicut

2020 – 2024

Higher Secondary Education

Jawahar Navodaya Vidyalaya Kannur, Kerala

CBSE Board

Secondary Education

Jawahar Navodaya Vidyalaya Kannur, Kerala

CBSE Board

TECHNICAL SKILLS

Programming Languages:	Python, C/C++, Java, JavaScript, MySQL
Web Tools:	HTML, CSS, ReactJS, ExpressJS, NodeJS, MongoDB
Dev Tools:	Linux, Git, Docker
Data Science:	ML, DL, NLP, CV, TensorFlow, PowerBI
Relevant Courseworks:	Operating System, Computer Networks, DBMS, OOP, Cloud Computing

PROJECTS

Digital Library Management System with MySQL As Backend DB

[System Design Doc](#)

Tech Stack: HTML, CSS, PHP, MySQL

[GitHub](#)

- Designed a RDBMS schema with BCNF normalized tables and established indexing and foreign key constraints.
- Optimized queries and implemented stored procedures with triggers to reduce latency and improve maintainability.

Suspect Localization in High-Density Environments Using Deep Learning

[Journal Paper](#)

Tech Stack: Python, tensorflow, Matplotlib, Numpy, Scikit-Learn, TensorFlow, YOLO.

[GitHub](#)

- Analyzed 30 IEEE research papers to solve problems like masked faces, dimness, pixelated and non-frontal faces.
- Used WIDER Face for training and applied performance metrics such as IoU, mAP, precision, recall, and F1 Score.

Applied Machine Learning & Data Analytics in Credit Card Fraud Detection

Tech Stack: Python, sklearn, matplotlib, supervised machine learning

[GitHub](#)

- Applied Data Engineering and Analytics, along with EDA, Anomaly Detection, and Predictive Model Comparison.
- Trained supervised learning classifier models and evaluated their performance using recall, precision & F1-score.

CERTIFICATIONS

- Career Essentials in **Data Analysis** by Microsoft and LinkedIn
- MySQL Bootcamp:** Go from SQL Beginner to Expert by Udemy
- Web Development with **HTML, CSS, JavaScript & ReactJS** by IBM
- Learning **Docker** by LinkedIn
- Python** for Data Science by IBM
- Introduction to Cloud Computing**

POSITIONS OF RESPONSIBILITY

- Ragam Designers Committee**, Ragam (Cultural Fest), NIT Calicut
 - Designed 4 posters to reach an audience of 25,000 individuals and collaborated with 20 members.
- Public Relations Committee Member**, Tathva (Technical Fest), NIT Calicut
 - Enabled Tathva's involvement with 8+ top Karnataka colleges and maintained regular communication

ACHIEVEMENTS

- Ranked in the top 6% of global **LeetCode** users.
- Rated 1227+ (pupil) on **Codeforces**.
- Rated 1630+ (3-star) on **CodeChef**.
- Contributor title on **Kaggle**.
- 5-star rating in SQL on **HackerRank**.
- Contributed to open-source programs conducted by **GSSOC-Ext** and **Hacktoberfest'24**.
- Participated in Focus on Code data science **hackathon**
- GitHub contributions: **373 contributions** in 2023, **310 contributions** in 2024 and **432+ contributions** in 2025
- Cleared **Joint Entrance Examination (JEE) Mains 2020**, outperforming 1 Million+ candidates.
